

# INVERT SYSTEM SPRAYERS

Minnesota Wanner Company manufactures Invert sprayer equipment for roadside, aquatic and right-of-way applications. We can supply complete sprayers or convenient pump paks for specialized applications.

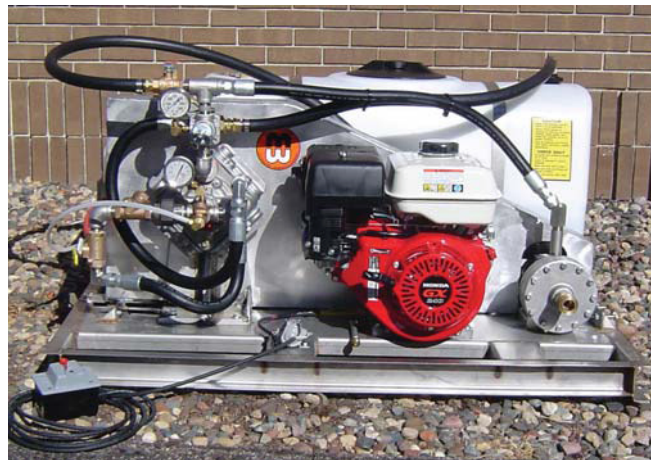

300 Gallon Invert Sprayer

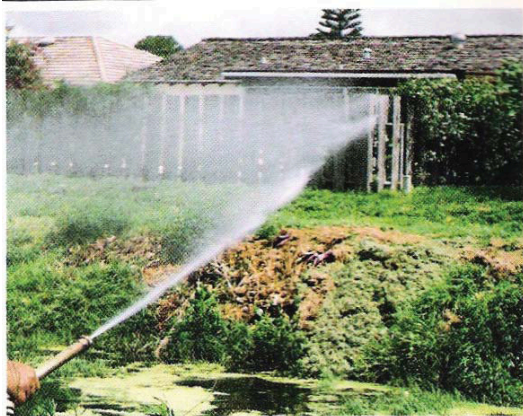

The invert process is a two fluid spray system that produces large drift resistant droplets. For over 30 years it has been one of the best application systems for sensitive areas needing maximum drift control. In the last several years new non-petroleum based emulsifiers have added new versatility for this highly effective system.

**Invert Benefits:**

- Invert minimizes drift and wash-off for increased safety and environmental protection.
- Increased accuracy of placement. Highly visible droplets make targeting undesirable plants easier.
- Invert spraying is more tolerant of less than ideal weather conditions.
